Giving lectures in auditoriums to large numbers of people is an outdated method of teaching. With the technology available today, there is no justification for it and everything should be done online. To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 350 words

Ever since the fourth industrial revolution, technology has undertaken an indispensable part in education. A school of thought maintains that the conventional way of projecting lectures has irrefutably become superannuated and thus should be superseded by online methods. From my perspective, notwithstanding the propitious influences of networked education, the role of traditional schooling is not outdated and can never be supplanted.

Admittedly, off-campus learning and teaching can have some auspicious effects on students' learning process. Firstly, it provides them with a great deal of amenity and flexibility. To elaborate, they can opt for comfortable places or arrange a flexitime schedule for studying. Such arrangements and dispositions can a convenient space and timetable for them and thereby partly enhancing the quality of learning. Secondly, distant schooling can help students develop some new skills. For example, students may organize their timetable as is mentioned earlier, which can improve their time-management skill. Also, they would be able to develop decision-making by choosing the suitable methodology for their study of their own volition.

Despite the aforementioned merits of hybrid learning, it is my firm belief that conventional ways of teaching will never pass into obsolescence. The underlying reason can be ascribed to the effectiveness of such methods over their online counterparts. For instance, teachers can assist their students directly by answering their queries or elaborating on the subject more clearly if they cannot comprehend the lessons, while they may be oblivious to pupils' process while instructing via the Internet. Besides, instructors can supervise and monitor learners throughout their study periods, optimally reducing the risk of sidetracking and distraction as opposed to the networked way of teaching. Another justification is that authentic classrooms can foster positive character traits. One of them is collaboration, which can be acquired through group activities and discussions about the subjects. In addition, they can procure the ability to socialize, characterized by the expansion of their relationships with new friends and teachers.

In conclusion, I fundamentally disagree with the statement that everything should be implemented online as conventional education has become obsolete. Although remote education has its advantages, it is my opinion that they are eclipsed by those of the traditional one. Nonetheless, it is advisable to incorporate the two methods into the studying process in order to learn effectively.

COMMENTS

Introduction: Your introduction is well-written and clearly presents your stance on the topic. However, there are a couple of minor improvements you can make. Instead of "Ever since the fourth industrial revolution," you can simply say "Since the fourth industrial revolution." Also, "superannuated" is a less common word choice; you might consider using "outdated" or "obsolete" instead.

Revised: Since the fourth industrial revolution, technology has played an indispensable role in education. A school of thought maintains that the conventional way of projecting lectures has irrefutably become outdated and thus should be superseded by online methods. From my perspective, notwithstanding the propitious influences of networked education, the role of traditional schooling is not outdated and can never be supplanted.

Body Paragraph 1: Your first body paragraph presents the advantages of online learning effectively. However, it would benefit from providing more specific examples or statistics to support your points. For instance, instead of just mentioning "a great deal of amenity and flexibility," you can give a concrete example of how online learning allows students to study at their own pace, access resources from anywhere, and accommodate other responsibilities.

Revised: Firstly, online learning provides students with unparalleled convenience and flexibility. For example, they can tailor their study environment to their preferences and arrange a flexible schedule that suits their needs. This freedom empowers students to balance work, family commitments, and educational pursuits effectively.

Body Paragraph 2: Your second body paragraph discusses the advantages of traditional teaching methods convincingly. To make it even stronger, try to provide more specific examples or anecdotes to illustrate how direct teacher-student interaction and face-to-face classrooms foster a conducive learning environment.

Revised: Despite the aforementioned merits of hybrid learning, it is my firm belief that conventional ways of teaching will never pass into obsolescence. The underlying reason can be ascribed to the effectiveness of such methods over their online counterparts. For instance, teachers can provide immediate feedback and support to students when they encounter challenges or have questions. This direct interaction ensures a deeper understanding of the subject matter and boosts student confidence.

Counter-argument: Your counter-argument is brief but effective. However, consider exploring this aspect a bit further. Acknowledge the growing popularity of online education and why it might appeal to certain students, especially those who thrive in a technology-driven environment.

Revised: While online learning has seen a surge in popularity and offers undeniable conveniences, it caters more effectively to self-directed learners who can manage their time and motivation independently. Students who prefer personalized attention and benefit from face-to-face interactions may find traditional classroom settings more conducive to their learning styles.

Conclusion: Your conclusion effectively restates your opinion. To make it more impactful, emphasize the importance of finding a balance between traditional and online teaching methods, rather than just suggesting their incorporation.

Revised: In conclusion, I fundamentally disagree with the statement that everything should be implemented online as conventional education has become obsolete. Although remote education has its advantages, it is my opinion that they are eclipsed by those of the traditional one. Nonetheless, striking a

balance between both methods in the educational landscape can leverage the strengths of each, ultimately leading to more effective and inclusive learning experiences.

Language and Vocabulary: Your language usage is generally strong. However, consider using more precise vocabulary and varied sentence structures to enhance the essay further. For instance, you can replace phrases like "can have some auspicious effects" with "can yield beneficial outcomes."

Grammar: Your grammar is mostly accurate. Be mindful of using the appropriate articles ("a," "an," "the") in some instances, and ensure subject-verb agreement.

Word Count: Your essay meets the minimum word count requirement of 350 words, which is excellent.

Remember to practice regularly and incorporate these suggestions to improve your writing skills for the exam. Good luck!

Task Achievement (TA): 7.0

- You have addressed the prompt and clearly stated your opinion.
- Your essay provides relevant arguments and examples to support your perspective.

Coherence and Cohesion (CC): 7.5

- Your essay is well-organized with clear paragraphs and logical progression of ideas.
- Linking words are used effectively to create smooth transitions between sentences and paragraphs.

Lexical Resource (LR): 7.0

- Your vocabulary is varied and mostly appropriate for the topic.
- Consider using more advanced vocabulary to further enhance your essay.

Grammatical Range and Accuracy (GRA): 7.5

1. Your sentences are well-structured, and you demonstrate a good command of grammar.
2. There are a few minor errors, but they do not impede overall communication.

Overall IELTS Band Score Estimate: 7.25

Improvement Suggestions:

3. Consider using specific data, research, or examples to support your points further.
4. Develop your counter-argument with more depth and nuance to demonstrate a balanced view.
5. Expand on the potential benefits of blending traditional and online teaching in your conclusion.
6. Vary your sentence structures and use more advanced vocabulary to strengthen your writing.

IMPROVEMENT:

Ever since the advent of the fourth industrial revolution, technology has assumed an indispensable role in education. A prevailing school of thought contends that the time-honored method of delivering lectures has unequivocally become antiquated and, therefore, ought to be supplanted by online approaches. From my vantage point, notwithstanding the propitious impact of networked education, the traditional mode of schooling remains relevant and irreplaceable.

Admittedly, off-campus learning and teaching can yield auspicious effects on students' learning process. Primarily, it affords them unparalleled convenience and flexibility. For instance, learners can select a comfortable environment or devise a flexible schedule for their studies. Such arrangements and dispositions provide a convenient space and timetable, thereby significantly enhancing the quality of learning. Secondly, remote schooling nurtures the development of valuable skills in students. By organizing their own study timetable, they cultivate invaluable time-management acumen. Moreover, they have the volition to choose the most suitable learning methodologies, thus fostering their decision-making capabilities.

Despite the aforementioned merits of hybrid learning, I firmly uphold that traditional teaching methods will never fall into obsolescence. The underlying rationale can be attributed to the efficacy of these methods as opposed to their online counterparts. Notably, teachers can provide immediate and personalized assistance to students, addressing their queries and elucidating subject matter when needed, which is not as readily achievable in remote instruction. Conversely, the virtual medium might render educators oblivious to their pupils' comprehension process. Additionally, instructors can closely monitor and supervise learners during their study periods, optimally mitigating the risks of distractions and deviations from the curriculum, unlike in the online context. Furthermore, the physical classroom setting facilitates the inculcation of positive character traits. Notably, it fosters a collaborative spirit through group activities and subject discussions, and it cultivates socialization skills as students expand their relationships with peers and mentors.

In conclusion, I vehemently disagree with the notion that everything should be exclusively conducted online, as conventional education remains far from obsolete. While remote learning offers certain advantages, they pale in comparison to the manifold benefits of traditional methods. Nonetheless, a prudent approach would involve an incorporation of both techniques to yield an effective and well-rounded educational experience.

Read the following extract and use your own words to summarize it. You MUST NOT copy or rewrite the original. Your summary should be between 100 and 120 words long.

The word *grandparents* is descriptive of the unique dual parenting role that this generation assume. It emphasizes the vital part they play in family life. With a wealth of old world experience behind them, and with the unique ability to metamorphose from advisers or mediators into listeners or friends, they can offer support and stability in an ever-changing world.

The underlying sense of responsibility that goes with this is tremendous. Grandparents perform a balancing act between the needs of their adult children and those of their grandchildren. This role is varied. It is imperial at times, muted at others. It goes underground whenever required, but it is solid and absolutely dependable.

Grandparents often bridge the gap between parents and their children. Rebellious, independent children who are trying to find their feet are almost always at loggerheads with their parents. The role of grandparents can be very important provided they act as impartial judges and are able to convey this feeling to both parties. Grandchildren prefer to listen to their grandparents rather than their parents, who often find themselves up against a brick wall.

One important thing, which seems to be missing in the lives of children today, is a sense of family,values, beliefs and principles. This is where the grandparents step in. However, instilling beliefs and values is not as easy as it was fifty or sixty years ago. Then, no questions were asked and there was an implicit sense of trust. With changing times and changing outlooks, children have started to question the validity of everything around them. Globalization has eroded their sense of belonging and weakened identification with their roots. Science and technology force them to doubt every traditional belief.

Parents, who have so many demands on their time, are perhaps not in the best position to instill traditional values in their offspring. Children are very demanding and grandparents, without appearing to be pushy, have both the time and the experience to deal with tantrums. They can appease, soothe and impart values with tremendous ease. Our Indian culture is rich and varied, but how many children recognize this? Grandparents can teach them to appreciate cultural traditions
and inform their moral development.

ANSWER:

The excerpt discusses about the role undertaken by grandparents in children nurturing. One responsibility is to treat their mature offsprings and their grandchildren equitably. Fair treatment is predominantly latent, yet can be reliable and done surreptitiously if necessary. Another part grandparents play is that they can act as intermediaries between parents and children. When children develop, disagreements with their parents are virtually ineluctable due to teenage rebellion and individualism. Such frictions can be solved by non-preferential advices given by grandparents as they are more favored compared to parents. Besides, the elderly in families can communicate traditional and cutural identities to youngsters as well as imbuing moral values, especially in the age of globalization.

COMMENT:

Based on a total score of 10 marks, I would score this summary as follows:

1. **Content (Relevance and Completeness):** 8/10 The summary effectively captures the main points of the original excerpt, discussing the role of grandparents in children's nurturing, treating offspring and grandchildren equitably, acting as intermediaries between parents and children, and imparting traditional and cultural identities. It provides a comprehensive overview of the original text.
2. **Language (Clarity and Sophistication):** 8/10 The language used in the summary is clear and mostly sophisticated. There are a few minor language errors and some opportunities to further enhance vocabulary and sentence structures.
3. **Conciseness:** 8/10 The summary is concise and fits within the given word limit. However, there are a few places where sentences could be rephrased to be more concise without losing the meaning.
4. **Coherence and Organization:** 8/10 The summary maintains a good level of coherence and organization. The ideas flow logically, making it easy to follow the main points.

Overall Score: 8/10

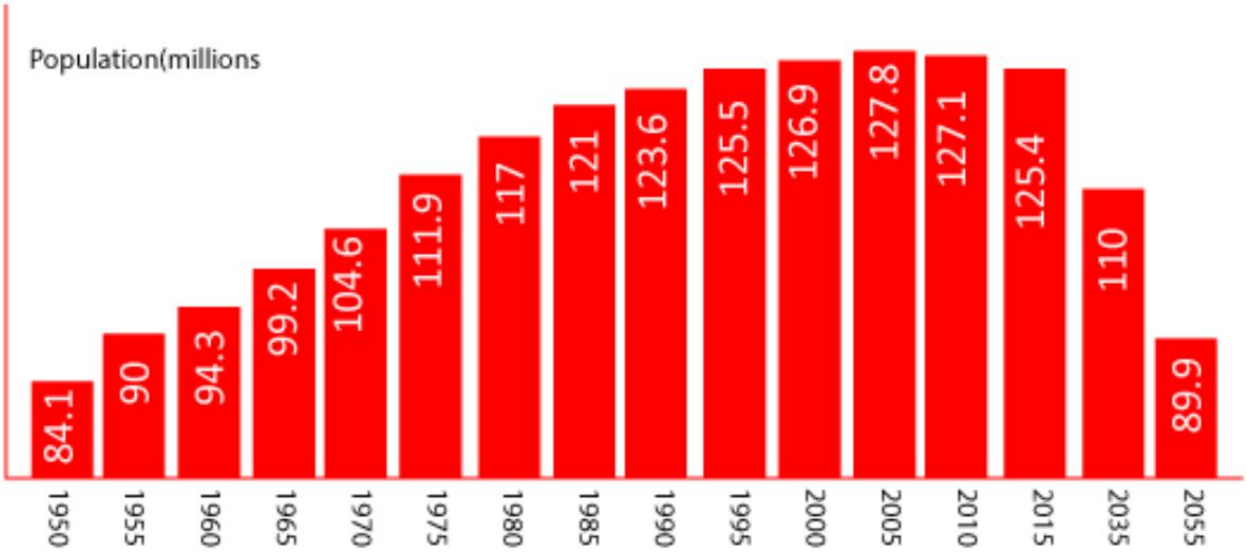
The summary effectively captures the essence of the original excerpt, providing a well-structured and coherent overview of the role of grandparents in children's nurturing. With some minor language and conciseness improvements, it has the potential to reach an even higher score. Keep up the good work!

IMPROVEMENT:

The summary explores the multifaceted role undertaken by grandparents in nurturing children. It highlights the imperative responsibility of treating both their adult children and grandchildren with equity, a duty executed with subtlety and unwavering dependability. Acting as bridges between parents and children, grandparents deftly navigate the inevitable conflicts arising from teenage rebellion and individualism. Their impartial counsel holds weight, as grandchildren often prefer their wisdom over that of their parents. Moreover, the elderly members of families serve as cultural and moral torchbearers, imparting traditional values and beliefs in the face of a rapidly globalizing world. Their significant contributions cultivate a sense of identity and appreciation for ancestral heritage, nurturing the moral development of the younger generation.

You should spend about 20 minutes on this task.

The chart and table below give information about population figures in Japan. Summaize the information by selecting and reporting the main features, and make comparisons where relevant. Your writing should be at least 150 words.



Over-65s	Population (millions)	Percentage of total population
1950	4.1	4.9 %
2005	25.7	20.0 %
2035	37.2	34.0 %
2055	36.5	41.0%

The presented chart illustrates the statistics on Japan's demographics between 1950 and 2055, while the table provides a further breakdown into the elderly population of the same period.

Overall, the total population of Japan **followed an upward pattern (1)**, which is predicted to reverse towards the end of the period. In addition, **the elderly demographics (65+) is projected to surge. (2)**

According to the illustration (3), Japan's population stood at 84.1 million in 1950, 4.1 million (4.9%) of which were over 65. Over the **subsequent (4)** 55 years, **the figure (5)** gradually increased and peaked at 127.8 million people. Likewise, the elderly population escalated, registering 25.7 million (one-fifth of Japan's population) in 2005.

From 2005 onwards, **there was and is predicted to be (6)** a negative correlation between Japan's population and its elderly demographics. To elaborate, the general population marginally decreased to 125.4 million in 2015 and is estimated to plummet to 89.9 million in 2055. By contrast, the figure for the over-65s is anticipated to soar, reaching 36.5 million (41% of the total population) at the end of the period.

COMMENT:

1. pattern nên đổi thành trend, thời gian chưa cụ thể
2. thế còn xu hướng dân số già tính đến hiện tại?
3. dài dòng
4. lỗi dùng từ (subsequent nên đổi thành next)
5. the figure của cái nào, trước đó em nhắc đến tổng dân số và dân số già
6. lỗi diễn đạt

IMPROVEMENT:

The presented chart illustrates the statistics on Japan's demographics between 1950 and 2055, while the table provides a further breakdown into the elderly population of the same period.

Overall, the total population of Japan followed an upward trend until 2005 and is predicted to reverse towards the end of the period. In addition, the elderly demographics (65+) witnessed sharp increases, which is projected to continue until 2055.

In 1950, Japan's population stood at 84.1 million , 4.1 million (4.9%) of which were over 65. Over the next 55 years, the figure for the former gradually increased and peaked at 127.8 million people. Likewise, the elderly population escalated, registering 25.7 million (one-fifth of Japan's population) in 2005.

From 2005 onwards, opposite trends can be seen in Japan's population and its elderly demographics. To elaborate, the general population marginally decreased to 125.4 million in 2015 and is estimated to plummet to 89.9 million in 2055. By contrast, the figure for the over-65s is anticipated to soar, reaching 36.5 million (41% of the total population) at the end of the period.

Note:

- khi làm phần overview thì cần nhận xét tổng quan về số liệu trong cả giai đoạn , tuy vậy từng xu hướng của số liệu nên có thời gian cụ thể đi kèm để phần overview trở nên rõ ràng hơn.

- "negative correlation" không sai, tuy nhiên cụm từ này có thể thay thế bằng "different/opposite trends" (recommended).

- "next/following years" thay vì "subsequent years" sẽ hợp lí hơn về mặt nghĩa.

- khi dùng các expression như "the figure / the number / ……" thì cần chú ý xem thông tin có rõ ràng hay không, nếu không thì cần phải bổ sung thông tin. Ví dụ như trong trường hợp của bài thì nên là "the figure FOR THE FORMER" hoặc "the figure FOR THE GENERAL DEMOGRAPHICS / POPULATION" khi mà ở trong câu trước đó có đề cập đến hai số liệu (tổng dân số và dân số già).

WEEK 1: Deadline: 23h- 15/07/2023

ESSAY 2:

Technological development leads to a lot of environmental issues, some people think a simple lifestyle can preserve the environment, while others argue that technology itself can solve it. Discuss both sides and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

Write at least 350 words

In the contemporary era, technological advancements have undertaken an indispensable role in human's life, yet such progresses can render many detrimental effects on the environment. A school of thought maintains that leading a austere lifestyle can mitigate those problems, while another supposes that they can be addressed by technology itself. The following essay will elaborate on both viewpoints before outlining my personal perspective regarding the matter.

On the one hand, living in minimalism with less sophisticated technology can definitely alleviate its pernicious impacts on the environment. The primary reason is that space-age devices are overwhelmingly to blame for the deterioration of the ecosystem. To specify, wastes discharged from modern household appliances in families such as washing machines and air-conditioners, or workplace devices and tools including computers constitute a considerable part in pollution. Accordingly, it is utterly justifiable to limit the use of contemporary equipment and opt for a simple style of living, given the positive correlation between the use of technology and the incidence of environmental hazards. Furthermore, simplicity can minimize the exploitation of natural resources, which can contribute to the preservation of the environment.

On the other hand, I strongly affirm the pivotal role that technological developments play in preserving the ecosystem owing to the following reasons. Firstly, advances in technology lead to the introduction of utilitarian machines that can help protect the environment. For example, the emergence of recycle machines has enabled people to renew unused materials and resources, diminishing the amount of wastes. Also, there are appliances that can convert solar energy into electricity, thereby dwindling the use of non-renewable resources. Secondly, advances in technology can also control the climate. Illustrative of this is the fact that gigantic fans has been installed in close proximity with nuclear power plants. These fans store radiations emitted from the power plant and control climate temperatures, thus averting the irreversible damage that global warming may cause.

In conclusion, I fundamentally agree with the statement that technological innovations can tackle disastrous effects imposed on the environment. Notwithstanding the propitious impacts of a minimalist lifestyle, it is my opinion that technology itself can combat those environmental problems. Nonetheless, it is totally advisable for people to live austerely when utilizing technology is immaterial.

Comments on your original essay:

Introduction:

- The introduction sets the stage by acknowledging the role of technology in modern life and its potential impact on the environment.
- However, it lacks a clear thesis statement that states the purpose of the essay, which is to discuss both sides and present the author's opinion.
- Consider adding a hook or real-world scenario to engage the reader and make the introduction more compelling.

Body Paragraph 1:

- The first paragraph effectively presents the viewpoint that a simple lifestyle can mitigate environmental issues caused by technology.
- It provides a specific reason for this viewpoint: modern household and workplace devices contribute to pollution.
- The paragraph would benefit from supporting evidence, such as statistics or studies, to strengthen the argument further.

Body Paragraph 2:

- The second paragraph argues in favor of technology as a solution to environmental problems.
- The examples of recycling machines and solar energy converters are relevant and help support the viewpoint.
- However, the paragraph could be improved by providing more specific evidence or real-life examples of how these technologies have made a positive impact.

Opinion:

- The author's opinion is clearly stated, favoring technology as a means to combat environmental problems.
- However, it lacks nuance and consideration of the potential benefits of both simplicity and technology working together.

Conclusion:

- The conclusion reiterates the author's perspective but misses an opportunity to summarize the main points and provide a more comprehensive resolution.
- Consider offering a balanced perspective, acknowledging the value of both simplicity and technology, and proposing a collaborative approach.

Writing Style:

- The essay demonstrates a relatively clear writing style but could benefit from using more sophisticated language and varied sentence structures to enhance its overall quality.

Word Count:

- The essay meets the minimum word count requirement but could be expanded to provide more comprehensive evidence and examples.

Revised Essay:

Title: Striking a Balance: Technological Development and Environmental Conservation

Introduction: In the contemporary era, technological advancements have become an integral part of human life, revolutionizing various aspects of society. However, these strides forward have raised concerns about their potential detrimental effects on the environment. This essay aims to explore two contrasting viewpoints on the matter: the belief that a simple, austere lifestyle can mitigate environmental issues and the perspective that technology itself can offer solutions. By analyzing both sides, we can uncover a balanced approach that fosters environmental conservation while embracing technological innovation.

Body Paragraph 1: Embracing a minimalist lifestyle with reduced reliance on sophisticated technology is considered an effective means of alleviating the pernicious impacts on the environment. Modern household appliances, such as washing machines and air-conditioners, along with workplace devices like computers, contribute significantly to pollution. Limiting the use of such high-tech equipment and adopting a simpler lifestyle can potentially reduce environmental hazards. Moreover, embracing simplicity minimizes the exploitation of natural resources, making it an eco-friendly choice.

Body Paragraph 2: On the other hand, technology itself can play a pivotal role in preserving the ecosystem. Advances in technology have introduced utilitarian machines that aid in environmental protection. For instance, the emergence of recycling machines has enabled people to renew unused materials and resources, significantly reducing waste. Additionally, appliances that convert solar energy into electricity have the potential to reduce reliance on non-renewable resources. Moreover, innovative technologies can help control climate change, with examples such as gigantic fans near nuclear power plants storing radiation and regulating climate temperatures.

Opinion: In conclusion, while leading a minimalist lifestyle can indeed have positive impacts on the environment, I fundamentally believe that technology itself can play a crucial role in addressing environmental problems. A collaborative approach that leverages the potential of technology while adopting sustainable practices in our daily lives is key. By balancing technological advancements with responsible environmental stewardship, we can pave the way for a greener and more sustainable future for generations to come.

IMPROVEMENT:

The contemporary world stands witness to remarkable technological advancements that have revolutionized human life, marking an era of unprecedented progress. However, the soaring development has ignited apprehensions about the potential detrimental effects on our delicate environment. This essay endeavors to delve into two contrasting perspectives on the matter: the proposition that adopting a simple, austere lifestyle can mitigate environmental issues, and the belief that technology itself holds the key to resolving these challenges. By meticulously exploring both viewpoints, we seek to uncover an informed and sophisticated approach that promotes environmental conservation while embracing the marvels of technological innovation.

Embracing a minimalist lifestyle, eschewing excessive reliance on sophisticated technology, is heralded as an effective means of curbing the pernicious impacts on the environment. Modern household appliances, such as washing machines and air-conditioners, along with cutting-edge workplace devices like computers, cast a substantial ecological footprint through their energy consumption and waste production. By consciously limiting the use of these high-tech gadgets and embracing a simpler lifestyle, we can potentially curtail environmental hazards. Moreover, opting for simplicity contributes to the preservation of natural resources, mitigating the relentless exploitation that plagues our ecosystems.

On the contrary, proponents of technological solutions emphasize the pivotal role that innovation can play in safeguarding the ecosystem. Technological progress has yielded utilitarian machines designed to aid environmental protection. For example, the advent of sophisticated recycling machines allows us to renew unused materials and resources, substantially reducing the waste burden. Furthermore, cutting-edge appliances capable of converting solar energy into electricity offer a promising pathway to reduce our reliance on non-renewable resources, nurturing a sustainable future. Moreover, innovative technologies, such as climate control mechanisms like gigantic fans positioned near nuclear power plants, demonstrate the potential to effectively regulate climate temperatures, combatting the looming specter of global warming.

In conclusion, while leading a minimalist lifestyle indeed holds merit in mitigating environmental issues, I staunchly uphold the belief that technology itself forms an indispensable component in addressing these challenges. A nuanced and enlightened approach, which amalgamates technological innovation with a responsible and ecologically-conscious mindset in our daily lives, is the keystone to forging a prosperous and sustainable future. By embracing the marvels of technological progress in tandem with unwavering environmental stewardship, we pave the way for a harmonious coexistence between humanity and nature, ensuring a thriving planet for generations to come.

OR IELTS BAND 9:

Achieving a Band 9 essay on the IELTS scale requires a higher level of language proficiency, complexity, and coherence. Below is an attempt to rewrite the essay to a Band 9 level:

Title: Striking a Synergistic Balance: Technological Advancements and the Environment

In the contemporary era, the pervasive influence of technological advancements on human life is undeniable. However, amidst the remarkable progress, apprehensions arise about the ensuing detrimental effects on our fragile environment. This essay aims to explore and evaluate two divergent perspectives on the matter: the contention that embracing an austere lifestyle can effectively mitigate environmental challenges, and the belief that technology itself possesses the potential to provide comprehensive solutions. By meticulously examining both viewpoints, we seek to uncover an enlightened and holistic approach that advocates for environmental conservation while harnessing the transformative power of technological innovation.

Advocates of a minimalist lifestyle assert that reducing our reliance on sophisticated technology holds the key to alleviating its pernicious impacts on the environment. Evidently, space-age devices, including modern household appliances and cutting-edge workplace equipment, are unequivocally linked to the deterioration of the ecosystem. Discharges from washing machines, air-conditioners, and computers significantly contribute to pollution and ecological degradation. Consequently, a prudent approach that involves curbing the excessive use of such contemporary equipment and embracing a simpler lifestyle becomes all the more compelling. Beyond reducing environmental hazards, simplicity offers the added benefit of minimizing the exploitation of finite natural resources, thus constituting a potent pathway towards environmental preservation.

On the other end of the spectrum, proponents of technological solutions maintain that innovation plays a pivotal role in preserving the ecosystem. Technological progress has paved the way for utilitarian machines designed to champion environmental protection. Recycling machines, epitomizing this triumph, facilitate the renewal of unused materials and resources, thereby substantially curbing waste accumulation. Furthermore, sophisticated appliances harness solar energy to generate electricity, effectively diminishing our dependence on non-renewable resources. Notably, breakthrough technologies like climate control mechanisms, exemplified by the installation of massive fans near nuclear power plants, proactively regulate climate temperatures to combat the imminent specter of global warming.

In conclusion, I wholeheartedly concur with the notion that technological innovations wield transformative power in mitigating disastrous effects on the environment. While the virtues of adopting a minimalist lifestyle are undeniable, I firmly believe that technology itself stands as a formidable ally in addressing environmental challenges. Embracing a symbiotic approach, one that seamlessly integrates technological advancements with unwavering environmental stewardship, constitutes the keystone to forging a sustainable and thriving future. By propelling responsible practices while harnessing the potential of technology, humanity can usher in an era where our environment flourishes alongside boundless progress.

SUMMARY 2

Read the following text and use your own words to summarize it. Your summary should be between 100 and 120 words long.. ***You MUST NOT copy the original.***

Why do Weight-Loss Diets Fail?

The popularity of diet crazes over the last 30 years shows that many of us think we are overweight. It also suggests that we want to do something about it. Diet books with the latest scientific advice become best sellers, and yet we continue to gain weight. Who's responsible? It's easy to blame scientific experts, but in my view, the problem is often with us, the dieters. We can't lose weight because of the way we think about food.

If we cannot follow a plan every day, no diet book can help. Many dieters change from one type of diet to another, so they never allow their bodies to get into a healthy rhythm. Others start out strongly on a program and lose a few pounds. Then, when their weight stays the same for a few weeks, they become discouraged and lose their self-control. If the weight doesn't go away quickly, they give up.

But the number on the scale is not our challenge. Modern life is so fast and stressful that many diets are ruined by "comfort eating". When we feel down, we want a slice of cheesecake or a chocolate brownie with ice cream to make us feel better. We use food as an escape. On the other hand, some of us use food as a reward. If we've done something well, we think we "deserve it".

We also need to pay attention to the food we eat. We should read food labels carefully and remember that we are often misled by them. Although a food package may say "low fat", manufacturers sometimes replace the fat with carbon hydrates, sugar, and other fattening substances. In addition, they may not take out much of the fat. Low-fat ice cream can have 70% of the fat or regular ice cream, so a scoop and a half of low-fat ice cream is more fattening than one scoop of regular.

There are just a few of the reasons why our diets fail, but they all arise from our state of mind and our ability to pay attention. The next time you reach for the cookie jar, remember: control your mind and you can control your body! The most important factor in losing weight is in our heads.

The excerpt elucidates the main reasons leading to the abortive attempts in following a diet. One underlying reason is that people are overly capricious and lack determination. To elaborate, some individuals change their eating and exercising habits too frequently, while some others can easily become disheartened for want of substantial progress at a short time. Another is ascribed to the fast pace and constraints of modern life. Dieters are inclined to pamper themselves with food such as desserts so as to reassure themselves against undesirable situations or simply to reward their own efforts, interrupting the routine they are following. Finally, deceptive statistics on nutrition of some products may lead consumers to absorb substances that can disrupt their diet.

I would score this summary 8 out of 10.

Strengths:

1. The summary effectively captures the main points of the original text, highlighting the reasons for diet failures.
2. It provides specific examples and elaborates on the reasons, demonstrating a clear understanding of the text.
3. The summary is concise and well-written.

Areas for Improvement:

1. There are a few minor grammatical errors and awkward phrasings that could be improved for greater clarity.
2. The summary could benefit from a more fluid and cohesive structure to enhance readability.

Revised Summary:

The excerpt explores the primary reasons for unsuccessful dieting attempts. One major factor is people's lack of consistency and determination, often changing their habits too frequently or becoming discouraged by slow progress. Modern life's fast pace and constraints lead to comfort eating or using food as a reward, disrupting diet routines. Additionally, deceptive nutritional information on products can hinder successful dieting. Overall, understanding and addressing these challenges are crucial for achieving effective and sustainable weight loss.

DETAILS

1. The excerpt elucidates the main reasons leading to the abortive attempts in following a diet.
   Correction: The excerpt elucidates the main reasons for the failed attempts to follow a diet.
2. One underlying reason is that people are overly capricious and lack determination.
   Correction: One underlying reason is that people are fickle and lack determination.
3. To elaborate, some individuals change their eating and exercising habits too frequently, while some others can easily become disheartened for want of substantial progress at a short time.
   Correction: To elaborate, some individuals frequently change their eating and exercise habits, while others become easily disheartened due to the lack of substantial progress in a short time.
4. Another is ascribed to the fast pace and constraints of modern life.
   Correction: Another reason is attributed to the fast pace and constraints of modern life.
5. Dieters are inclined to pamper themselves with food such as desserts so as to reassure themselves against undesirable situations or simply to reward their own efforts, interrupting the routine they are following.
   Correction: Dieters are inclined to indulge themselves with food, such as desserts, either to seek reassurance during undesirable situations or as a reward for their efforts, which interrupts their diet routine.
6. Finally, deceptive statistics on nutrition of some products may lead consumers to absorb substances that can disrupt their diet.
   Correction: Finally, deceptive nutrition statistics of some products may lead consumers to consume substances that can disrupt their diet.

Overall, the summary is well-written, but these corrections improve the clarity and coherence of the sentences.

IMPROVEMENT

The excerpt elucidates the primary factors contributing to the futile endeavors of adhering to a diet. One underlying cause stems from the fickleness and lack of steadfastness exhibited by individuals. Some frequently alter their dietary and exercise habits, while others easily succumb to discouragement when substantial progress is not achieved within a short timeframe. Another reason can be attributed to the relentless pace and constraints of modern life. Dieters tend to seek solace in indulgent foods, particularly desserts, either to cope with adverse situations or to reward their efforts, thereby disrupting their established diet routines. Furthermore, misleading nutrition statistics on certain products may lead consumers to unknowingly consume substances that disrupt their dieting efforts. Understanding and addressing these challenges are essential to achieving effective and sustainable weight loss.
